

Adding a prefix to the patient ID

1 Modifying the patient ID

- If you want to add a prefix to the patient ID you do that under study settings / patient ID configuration. The text field is by default set to display a patient ID with the country code, site code and patient code but can display any character(s) in combination with something that makes the ID unique.
- To add for example "SCR" in front of the ID, simply add SCR in the text field.

Patient Id Generation Settings

Subject ID format

SCR-{SiteCode:00}-{SiteSubjectSeqNo:000}
