

Global design settings

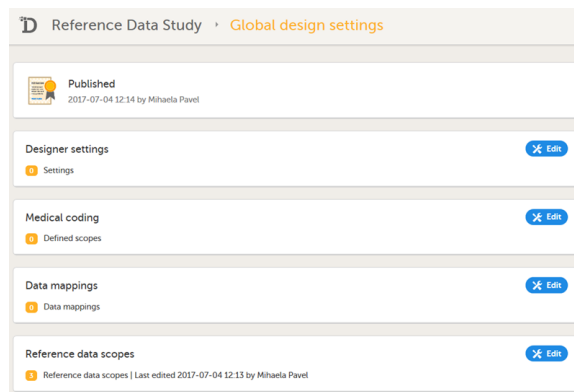

1 What are global design settings?

- Global design settings are settings that are applicable to all design versions of a design project.

2 Overview of the global design settings

- **Designer settings**
Here you can edit default field settings for date and time.
- **Medical coding**
Here you can create coding scopes for medical coding. Click [here](#) for more information.
- **Data mappings**
Here you can create data mappings for the import of external data into Viedoc. You can also download the Viedoc 4 Data Import Application in the Data mappings overview. Click [here](#) for more information.
- **Reference data scopes**
Here you can manage the reference data scopes. This is for reference data only. Click [here](#) for more information.

Global design settings

3 Publishing global design settings

- If you add or edit any of the global design settings, you need to publish the global design settings to make them available for the study in Viedoc.
- **Note!** A global design setting does not have to be assigned in Admin. It is automatically assigned to all sites upon publishing.
