

## Global design settings

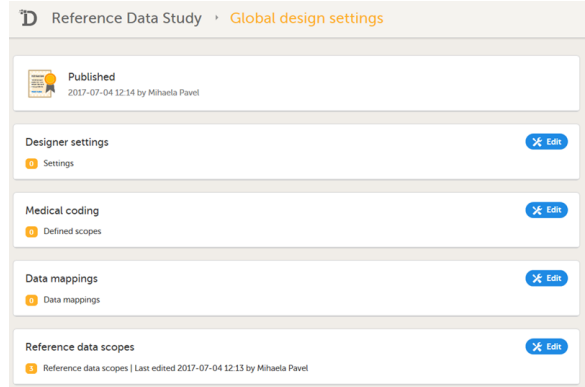

### 1 What are global design settings?

- Global design settings are settings that are applicable to all design versions of a design project.

### 2 Overview of the global design settings

- **Designer settings**  
Here you can edit default field settings for date and time.
- **Medical coding**  
Here you can create coding scopes for medical coding. Click [here](#) for more information.
- **Data mappings**  
Here you can create data mappings for the import of external data into Viedoc. You can also download the Viedoc 4 Data Import Application in the Data mappings overview. Click [here](#) for more information.
- **Reference data scopes**  
Here you can manage the reference data scopes. This is for reference data only. Click [here](#) for more information.

## Global design settings

The screenshot shows the 'Global design settings' page for a 'Reference Data Study'. The page is titled 'Global design settings' and includes a breadcrumb trail: 'Reference Data Study > Global design settings'. The page is marked as 'Published' on '2017-07-04 12:14' by 'Mihaela Pavel'. The settings are organized into four sections, each with an 'Edit' button:

- Designer settings**: Settings
- Medical coding**: Defined scopes
- Data mappings**: Data mappings
- Reference data scopes**: Reference data scopes | Last edited 2017-07-04 12:13 by Mihaela Pavel

### 3 Publishing global design settings

- If you add or edit any of the global design settings, you need to publish the global design settings to make them available for the study in Viedoc.
- **Note!** A global design setting does not have to be assigned in Admin. It is automatically assigned to all sites upon publishing.
