

Adding an auto counter in common events

1 How to add an auto counter in a common event form

- To add an auto counter in your form, add a single line text item, go to the functions tab in the settings pop-up and use the code below. Please observe that StudyEventRepeatKey is a string, so it requires the item type to be a single line text item.

- JavaScript:

```
return StudyEventRepeatKey;
```

The screenshot shows the settings pop-up for a single line text item. The 'Functions' tab is selected, and the 'Function' radio button is chosen. The 'Function logic (JavaScript) (?)' section contains the following code:

```
function getValue(){  
    return StudyEventRepeatKey;  
}
```
